ABOUT US

We would like to introduce ourselves as PYARELAL GROUP OF COMPANIES. The Pyarelal Group of Industries is a renowned conglomerate with a rich history and a diverse portfolio of businesses. Established in 1982, the group has steadily grown into one of the leading players in mattress and sofa industry, contributing significantly to the economy and societal development.

The group is one of the largest mattress raw materials and finished mattress manufacturing Group in India. It manufactures all mattress raw materials under 1 roof starting from Polyurethane Foam, Memory Foam, Rubberized Coir, Bonnell Springs, Pocketed Springs, Natural Rubber Latex sheets, fabrics, Non woven fabrics, PVC films, mattress edge tapes, Stretch films, Rexine, adhesives, Threads and related products. The group has a production capacity of manufacturing 4000 mattresses a day where 99% of the raw materials are manufactured in-house. PyareLal Group feels proud to represent itself as the **ONLY MANUFACTURER IN INDIA MANUFACTURING ALL TYPES OF MATTRESS RAW MATERIALS AND MATTRESSES.**

Led by a visionary leadership team and fueled by a commitment to excellence, innovation, and sustainability, the Pyarelal Group has expanded its presence across multiple industries and States in India. The Group has its manufacturing setup in (Palghat) Mumbai, Meerut (U.P), Palakkad (Kerala), Coimbatore (Tamil Nadu) and Banglore (Karnataka) With a focus on quality, reliability, and customer satisfaction, the Pyarelal Group has earned a stellar reputation for delivering cutting-edge products and services that meet the highest standards. Through strategic investments in research and development, state-of-the-art infrastructure, and talent development, the group continues to stay ahead of the curve, driving growth and fostering long-term success.

Furthermore, the Pyarelal Group is guided by a strong sense of corporate social responsibility (CSR), actively engaging in initiatives aimed at environmental sustainability, community development, and employee welfare. By integrating CSR principles into its business practices, the group aims to create positive social impact while also ensuring long-term sustainability and growth.

POLYURETHANE FOAM (PU FOAM)

Pyarelal Group is one of the leading PU foam manufacturers in India. It has 3 PU foam manufacturing units located at 3 different geographical locations in India. Our foams are manufactured with ultra modern German Technology from Hennecke GmbH.

It provides a very fine cell structure and strength to the foam. We make sure the resilience and tensile strength of the foams are maintained well which further helps to retain its bouncing nature and does not allow the foam to sag or tear on stretching.

The group manufactures foam of different variety and quality catering to different industries. It also manufactures technical foams catering to specific purpose in Industrial sector. The details of each of these foams are being described next.

PU Foams for Mattress and Furniture Industry

we manufacture foams of all densities and quality catering to the mattress and furniture industry. The product range includes premium pure foams to cost effective commercial foams. We have product for every market and requirement in Mattress and furniture industry. The density ranges from 9 Kg/m³ density to 60 Kg/m³ density.

Super Soft Foam

We manufacture super soft foams for extra comfort and softness. These foams are generally used as mattress toppers or the comfort layers for sofas and mattresses. We can manufacture super soft foam of any density, as per the client's requirement.

- We generally manufacture super soft foam in 23 and 32 density.

Foam Blocks

The Company can supply foam blocks of all sizes and length in normal as well as in compressed form.

Peeled / Rolled Foam

We manufacture peeled foam rolls for various industries. These rolled foams are used extensively in quilting applications for mattress manufacturing. Peeled foam is obtained by cutting polyurethane foam long blocks with a special machine. These machines are set and adjusted as per required thickness and width of the foam rolls. We can make peeled foam of different thicknesses, different hardnesses, different colors, and different characteristics. We conduct the production of peeled foam with respect to our customer's needs.

- We can manufacture peeled or rolled foams in any density and minimum of 4 mm thickness onwards.

CNC / Profile Cut Foamed Foam

The group is equipped with latest CNC cutting machines which can cut foams of any density in any shape and size. The company can provide foams in any shape and size as per the drawings of the client.

Rebonded Foam

Rebonded foams are made from a combination of multiple densities of foam which are broken down and re-bonded under mechanical pressure into new blocks of consistent High Density Rebonded Material, which are then cut into desired length and width. The rebonding recycle process is carried out in the presence of special adhesives that makes it durable, strong and versatile. Rebonded foam possesses high sound and shock absorption properties. Use of a scientific foam to adhesive ratio gives our Rebonded Foam high tensile strength, % elongation and tear resistance. It is mainly used for mattress making and other various applications. Due to its hardness it provides back support and cushioning for great comfort.

- We manufacture rebonded foams from 70 density to 120 density.

MEMORY FOAM / VISCOELASTIC FOAMS

Memory foam was originally developed in 1966 under a contract by NASA's Ames Research Center to improve the safety of aircraft cushions. Memory foam consists mainly of polyurethane as well as additional chemicals increasing its viscosity and density. It is often referred to as "Viscoelastic polyurethane foam, or low-resilience polyurethane foam (LRPU). Higher density memory foam softens in reaction to body heat, allowing it to mould to a warm body in a few minutes.

- We manufacture memory foam of any thickness and size.
- We normally manufacture memory foam in 65 density but we can provide other density as per client's requirement.

Gel Infused Memory Foam

Adding gel microbeads to memory foam also increases the density of the memory foam, creating a surface that's soft, yet firm. Like traditional memory foam, gel-infused foam will still mold to your body, but the benefit is that you won't experience the heat.

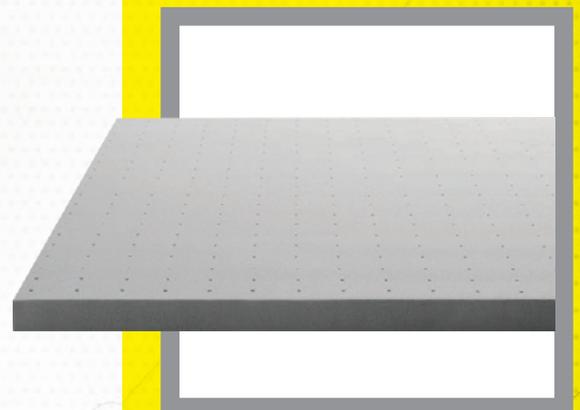

Copper Infused Memory Foam

Copper infused memory foam is produced by mixing in copper gel beads during the foam pouring process. Copper infused memory foam does not contain metallic copper and will not expose the user to heavy metal toxicity.

Charcoal Infused Memory Foam

Eliminates odors. Absorbs and draws away excess moisture. Improves deep sleep through body temperature regulation. Memory foam is moldable and supportive to your head, neck, and shoulders. "Visco elastic" polyurethane foam, or low-resilience polyurethane foam (LRPU). Higher-density memory foam softens in reaction to body heat, allowing it to mould to a warm body in a few minutes.

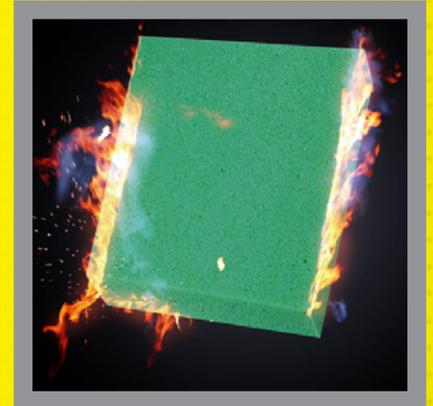

Speciality / Technical Foams

Fire Retardant Foam

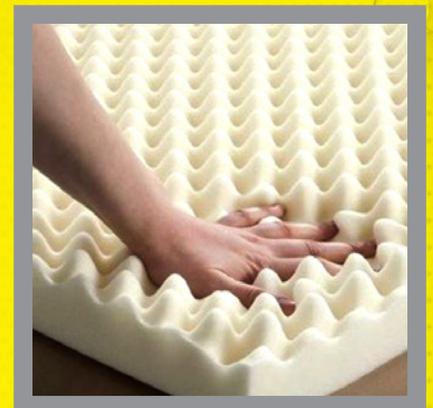

A fire retardant foam is simply a stable mass of small air-filled bubbles, which have a lower density than oil, gasoline or water. Our special fire Retardant foams not only slow down the fire but also get self-extinguished. These foams can be made using polyether polyol or polyester polyol, Fire Retardant foams find its major applications in Building and construction, automotives and transportation.

- These fire retardant foams can be manufactured in any density as per the customer's requirement.

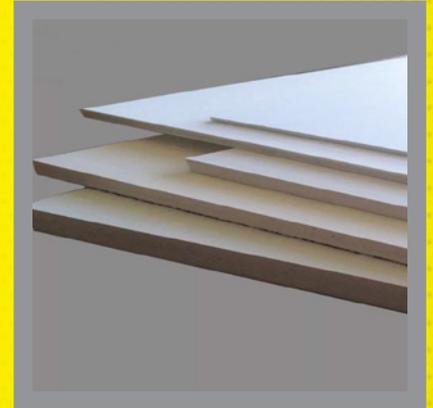

Convolutated Foam / Egg Crate Profiled Foam

Profile foam is used in mattress manufacturing. It has great medical properties. It helps in reducing bed sores. It also allows air to pass through the foam, thereby reducing the temperature of the foam. Profile Foam is a great product for reducing noise reverberating inside a room or an enclosure. Most commonly used in areas where sound needs to be dampened such as studios and cinema rooms. Small enclosures such as boxing in shower pumps and machinery enclosures would also benefit from its acoustic properties. Any density of foam can be convoluted as per the clients requirement of foam thickness.

UV Foam

UV foams are special foams which does not get pale over a period of time. discoloration is a process of oxidation which makes the color of the foam fade. This foam contains anti oxidants which does not allow the oxidation to take place as a result the foam discoloration does not take place. This foam is used as special applications such as innerwears, sports, clothing, etc.

Lamination Foam Rolls / Sheet

Our lamination foam is structurally tuned in such a way that the thickness loss after flame lamination is minimum and the composite will have maximum bonding strength. In order to do so, the cell structure, cell size distribution, cell orientation and the porosity of the foams is tuned properly. This foam is a perfect medium for flame and glue laminations with various normal and technical textiles or leather.

- We normally manufacture lamination foam of density 13, 16, 18 and 23, but we can manufacture lamination foam of any density as per the client's requirement.
- These foams are available in roll form having a joint at every 28 meters.
- We can provide the thickness of the sheet from 4 mm onwards.

LATEX FOAM

Natural latex is made from the milk of the rubber tree. Natural rubber latex foam has been produced from natural rubber latex with centrifugation and addition of foaming agent to create an air-filled matrix structure. Latex foam rubber, used in mattresses, is well known for its endurance. The main physical properties of foam rubber are generalized as being “ cushioning performance, thermal and acoustic insulation and impact dampening”. Natural rubber is resistant to dust mites and other allergens that common polyurethane foams are susceptible to building up over time. Natural rubber is significantly more elastic than full synthetic or blended latex. This means it is able to stretch more without breaking and to rebound similarly to a steel spring which makes for a much more responsive and supportive foam. This elasticity is the basic foundation of what makes natural rubber so desirable.

Single Block Latex Sheets

The group is equipped with a latest technological advanced latex foam production line. It can provide latex sheet on any standard size in single block up to 8 inches of thickness. The company can provide indian rubber board certified pure latex sheets as per the client requirements.

Gel Infused Latex Foam

COIR SHEETS / BLOCKS

The group is a pioneer in manufacturing coir sheets and blocks for mattresses in India since its inception. The group manufactures all types of coir sheets and blocks which are available in the market today.

Rubberized Coir Sheet

Rubberized Coir sheets are manufactured by processing coconut coir fibre with latex solution. While coir (coconut fibre) by itself does not have any resilience, once processed with latex solution, the sheet gets resilience. We are a trusted manufacturer and supplier of Rubberised Coir Sheets that are well-acclaimed among the clients due to their qualitative features. This ubberised Coir Sheet can be availed in various dimensions to meet the demands of the clients. The company manufactures rubberised coir sheets ranging from 50 density to 120 density.

- It can provide minimum of ½" thickness and maximum of 6" thickness in any size required by the client.

Reinforced Coir Sheet

This is a unique product with advanced features than the regular rubberized coir. Major components of this product are coir fibre and low melt polyester fibre. This combination makes the mattress mechanically more strong with natural comfort, firm support, allows air circulation and is non absorbent. Polyester fibre do not degrade over a period like natural latex, hence providing a longer life. Our polyester reinforced coir sheets have vertical lapping technology which provides great cushioning in the prouct.

- All regular mattress sizes can be produced. Thickness from 20 mm to 150 mm.
- Density from 60 kg/m³ to 150 kg/m³

SPRINGS / SPRING STRUCTURES

The company has all the latest manufacturing setup to manufacture any kind of springs and spring structures required to manufacture spring mattresses. It has the technology through which all its spring mattresses as can be rolled packed and exported to any country. It uses high carbon wires which also drawn in-house in order to have a complete control over the quality of the springs and spring structures.

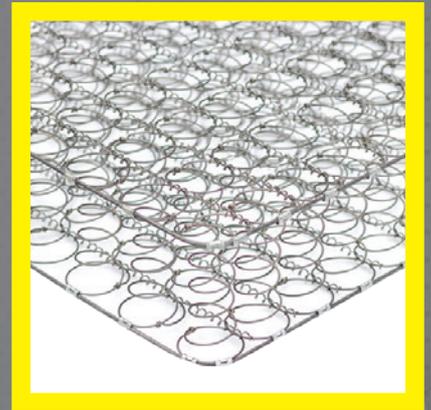

Bonnell Spring Unit

Bonnell Spring is the oldest spring type technology and is currently widely used in the entry-level spring mattresses. Bonnell springs are hourglass-shaped, and the ends of the wire are knotted or wrapped around the top and bottom circular portion of the coil and self-tied. All the individual spring are then tied together using spring wire, and the completed structure is reinforced with a strong border wire to retain shape.

- We can provide bonnell spring structures in 125 mm and 145 mm height.
- We can also provide Bonnell springs in various forms and with additional accessories as per the customer's requirements, Few of them are stated below:-
 - 1) Bonnell Individual springs
 - 2) Bonnell spring structure with wire border
 - 3) Bonnell Spring Structure without wire border
 - 4) Bonnell Spring Structure with wire border and felt

Micro / Mini Pocket Spring Units

Pyarelal group is the only group manufacturing mini pocket spring units in India. These Micro pocket spring units acts as a comfort layer on any kind of mattress. These are the most premium spring units which are used in Mattresses as on today. These units are available in 30mm Thickness.

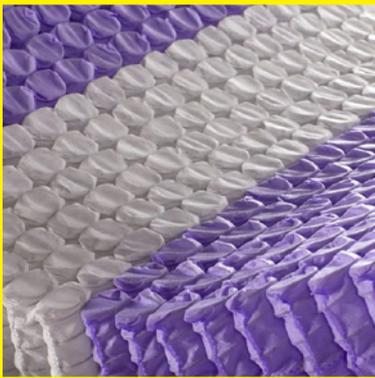

Pocket Spring Units

Pocketed Spring mattresses are a newer and a more superior type of spring mattress. In a Pocketed spring mattress the springs are wrapped inside an individual fabric case. Automated machines coil the wires and seal the coil inside the fabric encasement. Pocket Spring cross section
Once wrapped, these individual springs are attached to each other to maintain the shape of the mattress. Since only the fabric encasement is attached the coils inside can move independently of the springs adjacent to it. All our Pocket spring structures come with a layer of non woven fabric on top and bottom of the structures. We can provide Pocket spring structures in 120 mm and 155 mm height.

- We can also provide the pocket structures in various forms and with additional accessories for making the finished mattress.

Few of the combinations and variations are as under:-

- 1) Simple pocket spring structure.
- 2) Pocket spring structure with wire border.
- 3) Pocket spring structure with single wire border.
- 4) Pocket spring structure with wire border with felt.

Spring Wires

The group has its own facility for high carbon wire drawing. The group draws its own wires which are used for spring mattresses. With its own wire production a complete spring mattress integration is available with PI group. The raw material for the high carbon wires are sourced from reputed brands in order to maintain the quality of the wires.

Expanded Polyethylene Foam

Expanded Polyethylene or EPE is non-crosslinked, closed-cell polyethylene foam made from low-density polyethylene (LDPE) resins. EPE foam has good thermal insulation properties and is also waterproof, thus it has large number of packaging applications. We manufacture high quality EPE foam with different dimensions. These days EPE foam is used extensively in manufacturing of mattresses. The EPE foams helps in reducing the price of the mattresses as it is used as one of the layers in the mattresses to increase the mattress thickness.

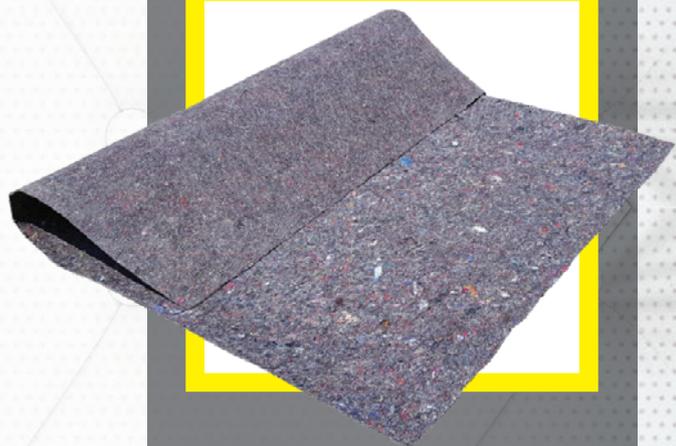

- The company manufactures EPE sheets in both sheets and roll forms.
- The sheets are provided in any thickness as per the requirement of the customer.
- The rolls can be provided with minimum thickness of 2 mm and the maximum of 10 mm.
- The width upto 2 meters can be provided in both roll and sheets form

Cotton Felt

Cotton felt is a non-woven textile that can be made of natural fiber such as wool or synthetic fiber such as acrylic. Felt can vary in terms of fiber content, color, size, thickness, density and more factors depending on the use of the felt.

we are involved in offering the optimum quality Cotton Felt that is fabricated under the guidelines of experienced professionals with the help of latest technological advancements as per the industry norms. Our offered product is much appreciated by our clients for perfect finish and long lasting. Our clients can avail the cotton felt in specific size and thickness as per their requirements.

PP NON Woven Fabric

Reckoned for properties like wear resistant, high material strength, durability and weatherproof ability, our PP spunbond non woven fabric is of unmatched standards. We make it available in a vast variety of grades. Buyers can purchase Fabric from us as per requirements. We are one of the leading Manufacturers & Suppliers of premium non woven Fabric. It is suitable for making different types of packaging and carry bags, Ultrasonic shopping bag, Gown, Interior Liners, Crop Covers, Curtains, shopper bags, Bed Spread, Seat Covers

- We manufacture PP non woven fabric from 16 GSM to 150 GSM in 63" width for general purpose
- We can also provide 80" width of non woven fabric for quilting purpose

Laminated Non Woven Fabric

The group manufactures Laminated non woven fabric. Lamination generally involves bonding multiple layers of material together to enhance durability, functionality, or aesthetics. Here the non woven fabric is laminated with very thin PP film on one side to give strength to the fabric.

Minimum GSM :- 20 GSM of fabric + 12 GSM of lamination Film

Features

1. Increased strength upto 20%
2. Water proof
3. Easier to Print
4. Provides a smooth, easy-to-clean surface.
5. Resistant to scratches
6. Multiple Uses: carry bags, furniture, agriculture sector, floorings, etc.

Laminated non-fabric materials are versatile and widely used in various industries due to their enhanced properties and protective qualities.

Mattress Fabrics & Quilted Fabrics

The group is also into manufacturing of fabrics for mattresses. The group manufactures both knitted and woven fabrics in house. Therefore the fabric of any quality, design, color and Size can be made as per customer's requirements.

We provide quilted fabric for mattresses.

- We have the most advanced multi needle quilting machines which can quilt upto 50 mm of foam.
- We can provide any type of quilted fabric in any thickness of quilt as per the requirement of the client.
- We use only peeled foam for the quilting therefore our quilts will have the foam joint after every 28 meters.
- We can provide quilting in memory foam as well

- 1) knitted fabric
- 2) jaquard woven fabric
- 3) warp knitted fabric
- 4) printed roto fabric

Knitted Fabric :

The company manufactures knitted fabric of various designs and GSMs through its latest jacquard circular knitted machines. Knitted fabric is a popular choice for mattress covers due to its flexibility, softness, and durability. Here are a few key points about knitted fabric for mattresses:

1. **Comfort:** Knitted fabrics are often chosen for their soft and comfortable feel. They provide a gentle, cushioned layer that can enhance the overall comfort of a mattress.
2. **Breathability:** knitted fabrics have good breathability, which helps in regulating temperature and reducing heat buildup.
3. **Stretch and Flexibility:** Knitted fabrics are inherently stretchy, which allows them to conform to the shape of the mattress. This can help in accommodating various mattress shapes and sizes.
4. **Easy Care:** Knitted fabrics are generally easy to care for. They can be machine washed and dried.

The company also manufactures specialised knitted fabric as below:-

1. Antimicrobial knitted Fabric
2. Cooling knitted fabric
3. Fire resistance knitted Fabric
4. Anti Slip Knitted Fabric

The Knitted fabric can be provided from 150 GSM onwards

Jacquard Woven Fabric

Jacquard woven fabric is increasingly used in mattress covers due to its durability, aesthetic appeal, and ability to provide added comfort.

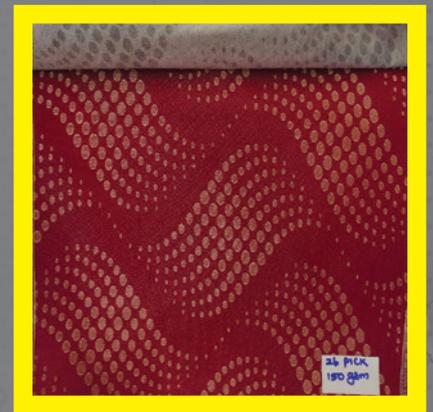

Advantages of Jacquard Woven Mattress Fabric

1. **Durability:** Jacquard fabrics are known for their strength and resilience. The intricate patterns are woven into the fabric rather than printed on top, which means they are less likely to wear out or fade over time. This makes them ideal for the frequent use and stress that mattress covers endure.
2. **Aesthetic Appeal:** Jacquard weaving allows for complex and elegant patterns to be integrated into the fabric. This can add a touch of luxury and sophistication to the mattress cover, enhancing the overall look of the bedding.
3. **Breathability:** The non laminated Jacquard fabrics can offer good breathability. This helps in regulating the body temperature.

The Company is manufacturing the following types of Jacquard Woven Fabric

1. Heavy GSM jacquard Fabric :- 175 GSM onwards
2. Non woven laminated Jacquard Fabric :- 150 GSM Onwards
3. Film Laminated Jacquard Fabric :- 125 GSM onwards

Special treatments such as Antimicrobial Fabric, Cooling fabric, Fire resistance Fabric, Anti Slip Fabric, etc can be provided on the fabric

Warp Knitted Fabric

Tricot warp knitted printed mattress fabric combines the durable and smooth characteristics of tricot warp knitting with decorative printed patterns. This type of fabric is used in mattress covers to add visual appeal while maintaining functionality.

Characteristics:

1. Fabric Structure:

- **Warp Knitting:** The tricot fabric is made using warp knitting, where yarns are knit in vertical columns (warp direction) rather than in horizontal rows (weft direction). This results in a strong, stable fabric that resists unraveling.
- **Smooth Texture:** The fabric has a smooth and often lustrous surface on one side, providing a soft feel against the skin.
- **Designs:** Printed tricot fabrics feature various patterns, including floral, geometric, abstract, or thematic designs.
- **Wear Resistance:** Tricot fabrics are generally resistant to wear and tear, making them suitable for mattress covers that need to endure daily pressure and movement.

Applications:

- **Mattress Covers:** The primary use of printed tricot warp knitted fabric is as a cover for mattresses. The print adds a decorative element while the fabric's durability ensures long-lasting performance.
- **Protective Linings:** It can also be used for protective linings or additional layers in mattress construction.

Printed Roto Fabric

Roto polyester printed mattress fabric is a type of textile used in mattress covers and ticking that combines the durability of polyester with printed designs for aesthetic appeal. The company provides the fabric starting from 75 GSM. Roto polyester fabrics can be printed with various patterns, such as floral, geometric, abstract, or thematic designs. The printing process is typically done using technique of rotary screen printing.

Mattress Edge Tape

The company is a noted Manufacturer of high quality Mattress Edge Tape. It is widely used as bedding of the mattress. For the manufacturing of our tape, we make use of the finest quality raw materials. The manufacturing process is conducted under the supervision of experts and thus there are minimal chances of flaws at buyer's end. Buyers can obtain Mattress Edge Tape in bulk and at very affordable rates from us. We provide Tapes in various colours and designs.

- 1) woven edge tape
- 2) crochet edge tapes
- 3) Jacquard Tapes
- 4) sofa elastic tapes

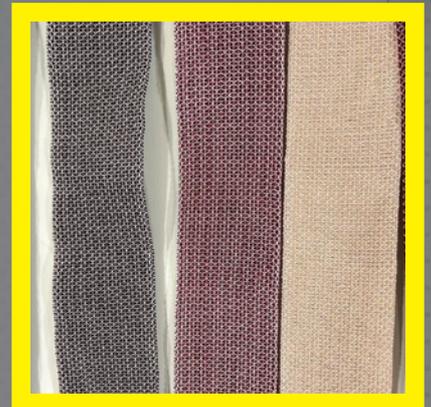

Woven Edge Tape

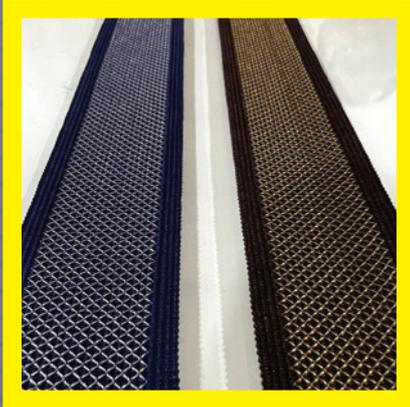

The woven tapes are manufactured from 720 gram per 100 meters to 2200 grams per 100 meters in 42mm width. Different designs and colors are available.

Crochet Tapes

The crochet tapes are manufactured from 1200 Gram per 100 meter to 1600 gram per 100 meter in 42mm width. Different designs and colors are available.

Jacquard Tapes

Sofa Elastic Tapes

Sofa elastic tapes are an essential component in upholstery, used primarily for securing and stabilizing cushions and upholstery fabric on sofas and other furniture. They help maintain the shape and integrity of the furniture by providing a flexible, yet secure, hold. The Elastic tapes for sofa are manufactured as per customers required size and weight.

- Width: Typically available in widths ranging from 1 to 3 inches (2.5 to 7.5 cm), with wider tapes providing more support.
- Thickness: Varies depending on the required strength and flexibility; thicker tapes provide more resistance and support.

PACKAGING MATERIAL

Flexible PVC Film

The company also manufactures Polyvinyl chloride (PVC) Film We provide a wide variety of PVC films both tube type and flat type. Our flexible pvc films are made from high quality raw materials, manufactured on state-of-the-art blowing lines operated by experienced and qualified technicians We can provide PVC sheet from 0.04 mm (40 micron) thickness to 0.20 mm (200 micron) thickness. We supply both tube type as well as the imported flatroil type PVC

Stretch Films

The group manufactures Stretch films for both Machine application and Manual applications These Stretch films can be made in any size and micron as per the clients requirements. It is majorly used in furniture industry for packing of furnitures.

ADHESIVES & THREAD

Adhesives

The group has its own production facility for adhesives for pasting application for mattress and furniture industry. Both sprayable and non sprayable adhesives are manufactured by the group. These adhesives are made with at most care to provide the perfect bonding required for the furniture industry.

Thread

We are widely popular in the industry for our exclusive collection of thread. This thread is widely used in different textile industries. The product is tested on all parameter in order to deliver defect free product to our clients. Also, we provide this thread at market leading prices and in safe packaging options to prevent it from dust and water while transport.

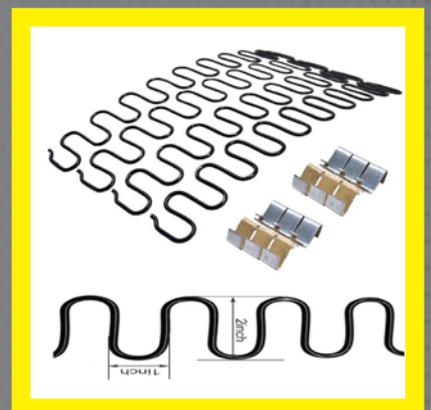

Mattress & Sofa Accessories

We supply all the mattress accessories required by the mattress manufacturers. Few of the accessories are mentioned as below

Mattress
Air Vents

- Mattress Handles
- Coir Felt
- Spring Clips, Pins & Crings
- Clips Tools Hot Melt Glue & V Pins
- Sprayable & Non Sprayable Adhesive

1. Zig Zag Clips
2. Sofa Belts
3. Sofa and Furniture Pins
4. Recron Fiber
5. zig zag Springs

Zig Zag Spring

Zigzag sofa springs, also known as "zigzag springs" or "sinuous springs," are a popular component used in the construction of upholstered furniture. They are designed to provide support and enhance the comfort of sofas, chairs, and other seating furniture.

Zigzag Pattern:

The springs are formed in a continuous zigzag pattern, creating a series of connected, wave-like shapes. This design provides a flexible and supportive seating surface.

High carbon steel is used to manufacture these springs. The wire thickness can be provided as per the user's requirement.

Mattresses

We can manufacture any mattress with any combinations and any finish as per client's requirements under client's brand name. We can provide the best price for the mattresses, as we have almost all the raw materials required for mattresses being manufactures in house. We can be your manufacturing partners. We can supply you the mattresses as per your specifications with best of the quality and you can get rid of the manufacturing and just concentrate your time and money only on marketing. Various types of mattress various types manufactured by us are as being mentioned below. We supply any combinations of any of these types.

- Coir Mattress
- Epe Mattress
- Foam Mattress
- Rebonded Foam Mattress
- Memory Foam Mattress
- Natural Rubber Latex Foam Mattress
- Bonnell Spring Mattress
- Pocket Spring Mattress

PILLOWS

Foam Pillow

The foam pillows are made from super soft PU foam, covered with cotton cloth. Provides gentle yet firm support to your head and neck in any sleeping position, and also avoids neck pain. Foam pillow gives excellent comfort and durability. Foam pillow is specially treated for protection against bugs and allergens. We can provide these pillows in any size.

Conjugated Hollow Fibre Pillow

The foam pillows are made from super soft PU foam, covered with cotton cloth. Provides gentle yet firm support to your head and neck in any sleeping position, and also avoids neck pain. Foam pillow gives excellent comfort and durability. Foam pillow is specially treated for protection against bugs and allergens. We can provide these pillows in any size.

Memory Contour Pillow

A sleep pillow with a curved design that adapts to head, neck and shoulder contour for back sleepers and side sleepers. Sleep more deeply and wake up with less pain and stiffness. The therapeutic design of this contour pillow adapts to your head, neck and shoulders to provide the enhanced support and gentle alignment you need, plus the comfort you want. The size of memory contour pillow is 21"x 14" x 3.5".

Memory Foam Pillow

The foam pillows are made from super soft PU foam, covered with cotton cloth. Provides gentle yet firm support to your head and neck in any sleeping position, and also avoids neck pain. Foam pillow gives excellent comfort and durability. Foam pillow is specially treated for protection against bugs and allergens. We can provide these pillows in any size.

Gel Infused Memory Pillow

The foam pillows are made from super soft PU foam, covered with cotton cloth. Provides gentle yet firm support to your head and neck in any sleeping position, and also avoids neck pain. Foam pillow gives excellent comfort and durability. Foam pillow is specially treated for protection against bugs and allergens. We can provide these pillows in any size.

Latex Pillow

Our 100% natural latex pillow is the perfect addition to any mattress. Soft, yet supportive, our pillow provides unparalleled comfort. This is the perfect finishing touch for your new bed. The pinhole design and open cell structure of the latex foam allow air to flow through the pillow, keeping you cool. The size of the Latex pillow supplied is 24" x 16" x 4"

Gel Infused Latex Pillow

Gel infused Latex Pillow will provide you with all night long cooling. It gives good support with Optimal pressure Relief. These Pillows prevent heat accumulation, providing you with a restful night sleep.

Cooling Gel Memory

Memory foam, also referred to as visco elastic foam, is foamed polyurethane with additional chemicals which increase its density and viscosity. The wide, cool gel top layer allows for even weight distribution, relieving pressure on your delicate neck and shoulders. It also provides a cooler sleeping surface ensuring a comfortable night's sleep.

Neck Pillow

A neck pillow is a specially designed pillow that supports your neck and head in a natural position. Neck pillow is designed to create a natural resting position for your head that maintains the lordotic curve of your spine. It helps in supporting your neck for a comfortable travel.

SLEEP ACCESSORIES

Mattress Protectors

Mattress protector is used to avoid your mattress from dusting and it provides you some cushioning as well. It is also given free with the mattresses these days for sales promotions. We supply these mattress protectors in various qualities as per the client's re-quirements

Mattress Toppers

Improve the comfort and support of your existing mattress with mattress toppers. It is a layer of comfort layer usually 1" or 2" of thickness which is fixed on the existing mattress. It revives the existing mattress with a smaller investment. We can manufacture these mattress toppers in any size and thickness. We provide mattress toppers in the following materials

- Super soft foam mattress toppers
- Memory Foam Mattress toppers
- Natural Latex Foam Mattress toppers

Comforter

Our comforters are designed to keep you warm and cosy. Perfect for usage during mild winters and in air conditioned rooms, these lightweight comforters are perfect for everyday use. 100 percent Microfiber Comforter features dual reversible colors

- Packaged in a bag with zipper
- Available sizes : 60x90 Inches & 90x100 Inches

Bed Sheets

We offer an exclusive collection of Bed Sheet Sets. Our Bed Sheets are offered with Pillow Covers. Bed sheet Sets provided by us are available in attractive designs and patterns to suit the ambience of your bedroom. Our bed sheet sets make the bedroom modish with their captivating designs and styles. All our bed sheets are easy to wash, smooth feeling and high quality. We provide both low priced bed sheets which are given free with mattresses and high end bed sheets for retail sells. We supply both polyester and 100% cotton bedsheets as per the customer requirements.

Bed Covers

Glam up your bedroom with an ethnic look with these bedcovers. Crafted with rich, luxurious fabrics in a variety of colours, and style with elegance, each bed cover adds delightful appeal to your bed room.

Rexin/Leatherette

Rexin, also known as Rexine, is a synthetic material commonly used as an alternative to leather. It is made from a variety of materials, typically including a fabric base coated with a layer of polyvinyl chloride (PVC) or polyurethane (PU). Rexin has gained popularity due to its versatility, affordability, and cruelty-free nature, as it does not involve the use of animal hides. Overall, rexin is a versatile and cost-effective material that serves as a practical substitute for leather in many applications. Its wide range of properties and customizable features make it a popular choice for manufacturers, designers, and consumers alike. The group manufactures rexin of various varieties for different applications such as upholstery, Automotive interiors, Fashion accessories, Luggage bags, medical equipments, footwear, Etc. It can be customized as per the requirement of customers and its application.

Molded Seat Cushions

The company also manufactures moulded injection foam. We offer wide range of moulded seat cushions for the best comfort ability. These seats are manufactured under the guidance of our experts ensuring the clients satisfaction. We design these seats for various purpose for their best comfort with smooth and soft layer of high quality foam.

- We provide these moulded seat cushions in PU foam as well as in memory foam.
- We can make any shape and side of the cushions as per the requirement of the client.

SOFAS / SOFA CUM BEDS / BED BASES

Sofas

The group is also into manufacturing of Upholstered Sofas and Sofa cum Beds. Since most of the sofa raw materials are manufactured in-house there is total quality control over the finished Product. The sofa designs, fabric and colors can be customized as per client's requirements.

Sofa Cum Bed

The Sofa Cum Bed is popular among the clients due to its compact design and ample utility. Our wide range of Sofa Cum Bed looks stylish and suits in all kinds of interiors. Easily flips from a sofa to bed in just few minutes with so much of ease. We can customise sofa cum bed as per the customer requirement. It is usually available in single seater, double seater & three seater, with and with out side handle.

Bed Bases/Cots

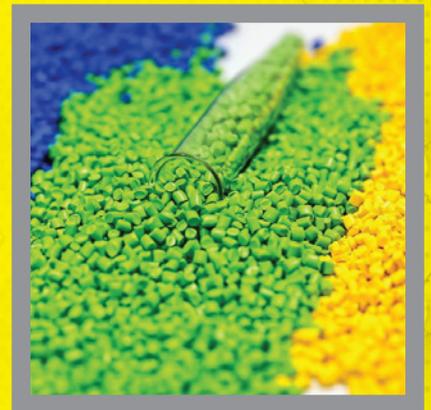

A bed base, sometimes called a foundation, is the part of a bed that supports the mattress. Our bed bases are perfect choice for people who want a basic bed frame that provides excellent support. We provide bed bases with different colours, different size and different designs. These are completely customizable as per the clients requirements.

Filler and Master Batches

Filler and Master Batches for the applications such as non woven, Films, Plastic injection mouldings, Woven sacks (Raffia), etc are manufactured by the company. The products are being used by the group for its in house production of goods. Therefore the products are manufactured with superior quality with latest technology.

RAW MATERIALS / CHEMICALS

P U Foam Chemicals

We are one of the leading PU foam manufacturers in India. We have multiple factories located at different parts of the country having a total production of more than 1500 tons a month. Therefore we have a huge in-house consumptions of chemicals used in manufacturing of PU foam Chemicals. We procure these chemicals domestically as well as from overseas. We buy these chemicals in bulk quantities therefore we get these chemicals at very low prices. We can supply these chemicals to other manufacturers. We can pass on these price benefit to our customers.

Few of the majore chemicals that we deal are as under:-

- Polyol ·TDI (Toluene diisocyanate)
- Polymerpolyol (pop)
- Foam Catalysts (TIN, Amine, Silicone, etc)
- Additives

PVC / LDPE / PP Ranuals:-

We can supply raw material for PVC films, EPE foams, Stretch Films and non woven fabrics. Since we have a huge in house use of these granules, we buy them in good quantity, therefore we are able to buy these raw materials at very low prices. We even directly import most of these materials at very low prices. Hence we can supply these materials to other manufacturers at much lower prices.

Mattress Machinery

The group also has an engineering wing which provides machinery for the mattress finishing. Therefore a complete solution is provided to any mattress manufacture at Pyarelal Group. Machineries such as Tape edge machine, Quilting machines, Sewing machines, handle making machines, Handle sticking machine, etc can be provided to the clients.
